Executive Summary

The City of Petaluma engaged Willdan Financial Services (Willdan) to determine the full costs incurred by the City to support the various activities for which the City charges user fees. Due to the complexity and the breadth of performing a comprehensive review of fees, Willdan employed a variety of fee methodologies to identify the full costs of individual fee and program activities. This report and the appendices herein identify 100% full cost recovery for City services and the recommended level of recovery as determined through discussion with departmental staff. The recommended fees identified herein are either at or less than full cost recovery.

User Fee Background

Background

As part of a general cost recovery strategy, local governments adopt user fees to fund programs and services that provide limited or no direct benefit to the community as a whole. As cities struggle to maintain levels of service and variability of demand, they have become increasingly aware of subsidies provided by the General Fund and have implemented cost-recovery targets. To the extent that governments use general tax monies to provide individuals with private benefits, and not require them to pay the full cost of the service (and, therefore, receive a subsidy), the government is limiting funds that may be available to provide other community-wide benefits. In effect, the government is using community funds to pay for private benefits. Unlike most revenue sources, cities have more control over the level of user fees they charge to recover costs, or the subsidies they can institute.

Fees in California are required to conform to the statutory requirements of the California Constitution, Proposition 218, Proposition 26, and the California Code of Regulations. The Code also requires that the City Council adopt fees by either ordinance or resolution, and that any fees in excess of the estimated total cost of rendering the related services must be approved by a popular vote of two-thirds of those electors voting because the charge would be considered a tax and not a fee. There are no fees suggested to be set above the cost of service and as such a public vote is not required.

California User Fee History

Before Proposition 13, In times of fiscal shortages, California cities were able to raise property taxes, which funded everything from police and recreation to development-related services. However, this situation changed with the passage of Proposition 13 in 1978.

Proposition 13 established the era of revenue limitation in California local government. In subsequent years, the state saw a series of additional limitations to local government revenues. Proposition 4 (1979) defined the difference between a tax and a fee: a fee can be no greater than the cost of providing the service; and Proposition 218 (1996) further limited the imposition of taxes for certain classes of fees. As a result, cities were required to secure a supermajority vote in order to enact or increase taxes. Due to the thresholds needed to increase local taxes, cities have less control and very few successful options for new revenues. The State of California took a series of actions in the 1990's and 2000's to improve the State's fiscal situation, at the expense of local governments. In 2004-05, the Educational Revenue Augmentation Funds ("ERAF") take-away of property taxes and the reduction of Vehicle License Fees further reduced local tax revenues.

In addition, on November 2, 2010, California voters approved Proposition 26, the "Stop Hidden Taxes Initiative", which is aimed at defining "regulatory fees" as a special tax rather than a fee, thus requiring approval by two-thirds vote of local voters. These regulatory fees are typically intended to mitigate the societal and environmental impacts of a business or person's activities. Proposition 26 contains seven categories of exceptions. The fees analyzed as part of a User Fee study typically fall under categories one through five consisting of charges for specific benefits, government service, regulatory need, for use of government property, or a fine/penalty.

Additional Policy Considerations

State regulations require that municipalities update their fee schedules to reflect the actual costs of certain public services primarily benefiting users. User Fees recover costs associated with the provision of specific services benefiting the user, thereby typically reducing the use of General Fund monies for such purposes.

In addition to collecting the direct cost of labor and materials associated with processing and administering user services, it is common for local governments to recover reasonable support costs. Support costs are those costs relating to a local government's central service departments that are allocable to the local government's operating departments. Central services support cost allocations were incorporated using the resulting indirect overhead percentages determined through the City's Cost Allocation Plan. This plan was used in the User Fee study to account for the burden placed upon central services by the operating departments in order to allocate a proportionate share of central service cost through the study.

As labor effort and costs associated with the provision of services fluctuate over time, a significant element in the development of any fee schedule is that it has the flexibility to remain current. Therefore, it is recommended that the City include an inflationary factor in the resolution adopting the fee schedule to allow the City Council, by resolution, to annually increase or decrease the fees.

The City may employ many different inflationary factors. The most commonly used inflator is some form of the Consumer Price Index (CPI) as it is widely well known and accepted. A similar inflator is the implicit price deflator for GDP, which is much like the CPI except that while the CPI is based on the same "basket" of goods and services every year, the price deflators' "basket" can change year to year. Since the primary factor for the cost of a City's services is usually the costs of the personnel involved, tying an inflationary factor that connects more directly to the personnel costs can also be suitable if there is a clear method, or current practice of obtaining said factor.

Each City should use an inflator that they believe works the best for their specific situation and needs. It is also recommended that the City perform this internal review annually with a comprehensive review of services and fees performed every five years, which would include adding, amending, or removing fees for programs/services.

Study Objective

As the City of Petaluma seeks to efficiently manage limited resources and adequately respond to increased service demands, it needs a variety of tools. A User Fee Study provides assurance that the City has the best information and the best resources available to make sound decisions, fairly and legitimately set fees, maintain compliance with state law and local policies, and meet the needs of the City administration and its constituency. Given the limitations on raising revenue in local government, the City recognizes that a User Fee Study is a very cost-effective way to understand the total cost of services and identify potential fee deficiencies. Essentially, a User Fee is a payment for a requested service provided by a local government that primarily benefits an individual or group.

The total cost of each service included in this analysis is based on the full cost of providing City services, including direct salaries and benefits of City staff, direct departmental costs, and indirect costs from central service support. This study determines the full cost recovery fee for the City to provide each service; however, each fee is set at the City's discretion, up to 100% of the total cost, as specified in this report.

The principal goal of the study was to help the City determine the full cost of the services that the City provides. In addition, Willdan established a series of additional objectives including:

- Developing a rational basis for setting fees
- Identifying subsidy amount, if applicable, of each fee in the model
- Ensuring compliance with State law
- Developing an updatable and comprehensive list of fees
- Maintaining accordance with City policies and goals

The study results will help the City better understand its true costs of providing services and may serve as a basis for making informed policy decisions regarding the most appropriate fees, if any, to collect from individuals and organizations that require individualized services from the City.

Scope of the Study

The scope of this study encompasses a review and calculation of the user fees charged by the following Petaluma departments and fee groups:

- | | |
|------------------|----------------|
| • Administrative | • Recreation |
| • Airport | • Fire |
| • Building | • Police |
| • Planning | • Public Works |
| • Housing | • Marina |

The study involved the identification of existing and potential new fees, fee schedule restructuring, data collection and analysis, orientation and consultation, quality control, communication and presentations, and calculation of individual service costs (fees) or program cost recovery levels.

Aim of the Report

The User Fee Study focused on the cost of City services, as City staff currently provide them at existing, known, or reasonably anticipated service and staff level needs. This report provides a summary of the study results, and a general description of the approach and methods Willdan and City staff used to determine the recommended fee schedule. The report is not intended to document all of the numerous discussions throughout the process, nor is it intended to provide an influential dissertation on the qualities of the utilized tools, techniques, or alternative approaches.

Project Approach and Methodology

Conceptual Approach

The basic concept of a User Fee Study is to determine the “reasonable cost” of each service provided by the City for which it charges a user fee. The full cost of providing a service may not necessarily become the City’s fee, but it serves as the objective basis as to the maximum amount that may be collected.

The standard fee limitation established in California law for such fees is the “estimated, reasonable cost” principle. In order to maintain compliance with the letter and spirit of this standard, every component of the fee study process included a related review. The use of budget figures, time estimates, and improvement valuation clearly indicates reliance upon estimates for some data.

Fully Burdened Hourly Rates

The total cost of each service included in this analysis is primarily based on the Fully Burdened Hourly Rates (FBHRs) that were determined for City personnel directly involved in providing services. The FBHRs include not only personnel salary and benefits, but also any costs that are reasonably ascribable to personnel. The cost elements that are included in the calculation of fully burdened rates are:

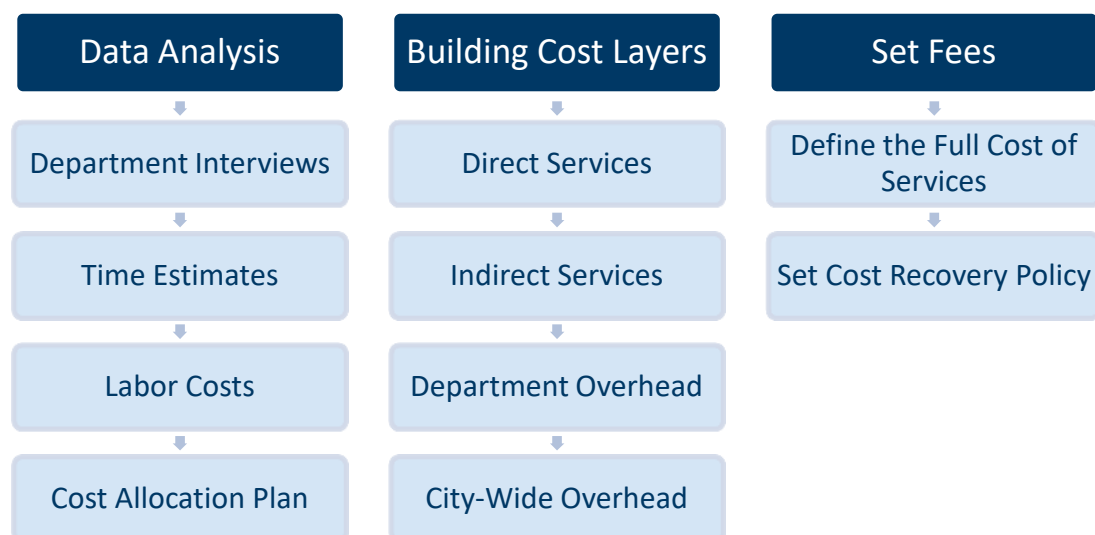

- Salaries & benefits of personnel involved
- Operating costs applicable to fee operations
- Departmental support, supervision, and administration overhead
- Indirect City-wide overhead costs calculated through the Cost Allocation Plan

An important factor in determining the fully burdened rate is in the calculation of productive hours for personnel. This calculation takes the available workable hours in a year of 2,080 and adjusts this figure to 1,680 productive or billable hours to account for calculated or anticipated hours’ employees are involved in non-billable activities such as paid vacation, sick leave, holidays, and other considerations as necessary. Dividing the full cost, including overhead, of a position by the number of productive hours provides the FBHR.

The FBHRs are then used in conjunction with time estimates, when appropriate for how a service is provided, to calculate a fee’s cost based on the personnel and the amount of their time that is involved in providing each service.

Summary Steps of the Study

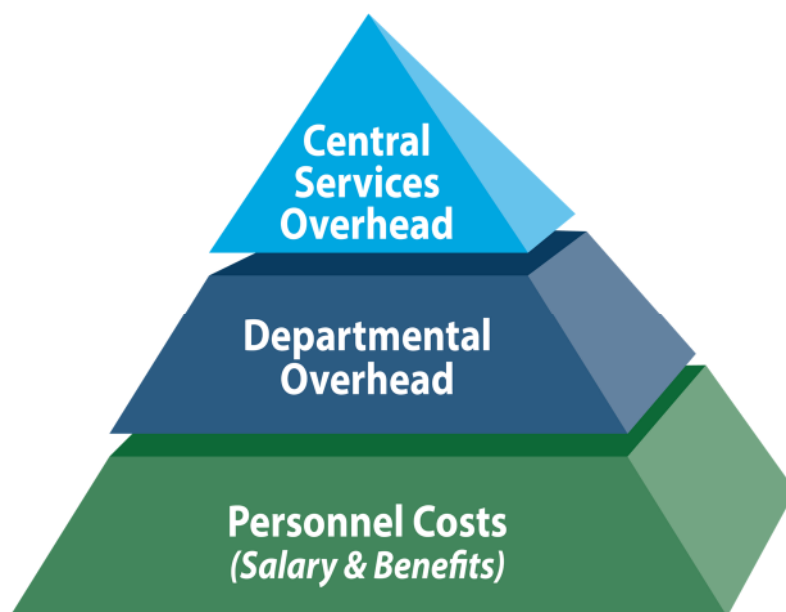

The process of the study is straightforward and simple in concept. The following list provides a summary of the study process steps:

Allowable Costs

This report identifies three types of costs that, when combined, constitute the fully burdened cost of a service (**Appendix A**). Costs are defined as direct labor, including salary and benefits, departmental overhead costs, and the City's central services overhead, where departmental and central service overhead costs constitute support costs. These cost types are defined as follows:

- **Direct Labor (Personnel Costs):** The costs related to staff salaries for time spent directly on fee-related services.
- **Departmental Overhead:** A proportional allocation of departmental overhead costs, including operation costs such as supplies and materials that are necessary for the department to function.
- **Central Services Overhead:** These costs, as provided via the City's Cost Allocation Plan, represent services provided by those Central Services Departments whose primary function is to support other City departments.

Methodology

The three methods of analysis for calculating fees used in this report are the:

Case Study Method (Standard Unit Cost Build-Up Approach): This approach estimates the actual labor and material costs associated with providing a unit of service to a single user. This analysis is suitable when City staff time requirements do not vary dramatically for a service, or for special projects where the time and cost requirements are easy to identify at the project's outset. Further, the method is effective in instances when a staff member from one department assists on an application, service or permit for another department on an as-needed basis. Costs are estimated based upon interviews with City staff regarding the time typically spent on tasks, a review of available records, and a time and materials analysis.

Programmatic Approach: In some instances, the underlying data is not available or varies widely, leaving a standard unit cost build-up approach impractical. In addition, market factors and policy concerns (as opposed to actual costs) tend to influence rental based fee levels more than other types of services. Willdan employed a different methodology where appropriate to fit a programs' needs and goals. Typical programmatic approach cases are facility use fees, penalties, and instances where a program cost is divided over the user base to obtain a per applicant cost for shared cost services.

Valuation Based Fees: This manner of collection is used when the valuation of the improvement can be used as a proxy for the amount of effort it would take for City staff to complete the service provided. More specifically, this approach is commonly used for certain User Fees in the Building Division. It is generally accepted that as a project's size scales up, the cost of the project increases, and the amount of effort needed to review and inspect also increases. Using a valuation-based fees provides for a system that can adjust as project sizes scale. Land is not included in the valuation.

Quality Control/Quality Assurance

All study components are interrelated, thus flawed data at any step in the process will cause the ultimate results to be inconsistent and unsound. The elements of our Quality Control process for User Fee calculations include:

- Involvement of knowledgeable City staff
- Clear instructions and guidance to City staff
- Reasonableness tests and validation
- Internal and external reviews
- Cross-checking

Reasons for cost increases/decreases over current fees

Within the fee tables in **Appendix C**, the differences are identified between the full costs calculated through the study and the fee levels currently in effect. The reasons for differences between the two can arise from a number of possible factors including:

-
- Previous fee levels may have been set at levels less than full cost intentionally, based on policy decisions
 - Staffing levels and the positions that complete fee and service activity may vary from when the previous costs were calculated
 - Personnel and materials costs could have increased at levels that differed from any inflationary factors used to increase fees since the last study
 - Costs that this study has identified as part of the full cost of services may not have been accounted for in a previous study
 - Departmental overhead and administration costs
 - Vehicle and Facility Maintenance support costs
 - Indirect overhead from the Cost Allocation Plan
 - Changes in processes and procedures within a department, or the City as a whole
 - Changes in the demand for services in a City may have also changed the staffing or cost structure of departments over time

City Staff Contributions

As part of the study process, Willdan received tremendous support and cooperation from City staff, which contributed and reviewed a variety of components to the study, including:

- Budget and other cost data
- Staffing structures
- Fee and service structures, organization, and descriptions
- Direct and indirect work hours (billable/non-billable)
- Time estimates to complete work tasks
- Review of draft results and other documentation

A User Fee Study requires significant involvement of the managers and line staff from the departments on top of their existing workloads and competing priorities. The contributions from City staff were critical to this study. We would like to express our appreciation to the City and its staff for their assistance, professionalism, positive attitudes, helpful suggestions, responsiveness, and overall cooperation.

Petaluma User Fees

Cost Recovery

The cost recovery models, by department/division fee type, are presented in detail in [Appendix C](#). Full cost recovery is determined by summing the estimated amount of time each position (in increments of minutes or hours) spends to render a service. Time estimates for each service rendered were obtained through interviews conducted with City staff for each department/division fee included in the study. The resulting cost recovery amount represents the total cost of providing each service. The City's current fee being charged for each service, if applicable, is provided in this section, as well, for reference.

It is important to note that the time data used to determine the amount of time each employee spends assisting in the provision of the services listed on the fee schedule is essential in identifying the total cost of providing each service, and will differ from City to City depending on staffing, positions involved, experience on staff, the use of consultants, and the policies and procedures in place for each City. Specifically, in providing services, a number of employees are often involved in various aspects of the process, spending anywhere from a few minutes to several hours on the service.

The primary goal of this study was to identify the cost of City services, to provide information to help the City make informed decisions regarding the actual fee levels and charges. The responsibility of determining the final fee levels is a complicated task. City staff must consider many issues in formulating recommendations, and the City Council must consider those same issues and more in making the final decisions.

City staff assumes the responsibility to develop specific fee level recommendations to present to the City Council. Unfortunately, there are no hard and fast rules to guide the City, since many of the considerations are based on the unique characteristics of the City of Petaluma, and administrative and political discretion. However, in setting the level of full cost recovery for each fee, one should consider whether the service solely benefits one end user or the general community.

Subsidization

Recalling the definition of a user fee helps guide decisions regarding subsidization. The general standard is that individuals (or groups) who receive a wholly private benefit should pay 100% of the full cost of the services. In contrast, services that are simply public benefit should be funded entirely by the general fund's tax dollars. Unfortunately, for the decision makers, some services fall into the range between these two extremes.

Further complicating the decision, opponents of fees often assert that the activities subject to the fees provide economic, cultural, "quality of life," or other community benefits that exceed the costs to the City, but it is important to distinguish the difference between any purported possible benefits that may be conveyed through the result of activities of the service receiver and the direct benefit being conveyed through the City providing the service to the requestor.

It is recommended the City consider such factors during its deliberations regarding appropriate fee levels.

Of course, subsidization can be an effective public policy tool, since it can be used to reduce fees to encourage certain activities (such as to ensure public safety) or allow some people to be able to afford to receive services they otherwise could not at the full cost. In addition, subsidies can be an appropriate and justifiable action, such as to allow citizens to rightfully access services, without overburdensome costs.

Despite the intent, it is important for the City and public to understand that subsidies must be covered by another revenue source, typically the General Fund's other unobligated funds. Therefore, the general taxpayer will potentially help to fund private benefits, and/or other City services will not have available funds that are otherwise directed to cover fee subsidies.

Impact on Demand (Elasticity)

Economic principles of elasticity suggest that increased costs for services (higher fees) will eventually curtail the demand for the services; whereas lower fees may spark an incentive to utilize the services and encourage certain actions. Either of these conditions may be a desirable effect to the City. However, the level of the fees that would cause demand changes is largely unknown. The cost of service study did not attempt to evaluate the economic or behavioral impacts of higher or lower fees; nevertheless, the City should consider the potential impacts of these issues when deciding on fee levels.

Summary

City staff is recommending setting user fees at 100% of the full cost identified in this study except for specific considerations where it makes sense based on how service is provided such as trade fees within Building that are often coupled together when provided, or for the City xeroxing fee where the full cost would be considered prohibitive. City and departmental goals, City Council priorities, policy initiatives, past performance, implementation issues, and other internal and external factors should influence staff recommendations and City Council decisions. In this case, the proper identification of additional services (new or existing services) and the update to a consistent and comprehensive fee schedule were the primary objectives of this study. City staff has reviewed the full costs and identified the recommended fee levels for consideration by City Council. The attached appendices exhibit these unit fees individually.

The preceding sections provide background for each department, division, and fee group and the results of this study's analysis of their fees. For the full list of each fee's analysis, refer to [Appendix C](#) of this report.

City Manager - Administrative

The City Manager's Office serves as the vital link between the major decisions made by the City Council and the committed, professional team responsible for providing essential services to the residents of Petaluma. In a council-manager form of government, an elected city council serves as the city's primary legislative body and appoints a chief executive officer called a city manager to oversee day-to-day municipal operations, draft a fiscally responsible budget that is responsive to the community's needs, and to implement and enforce the council's policy and legislative initiatives.

In order to maintain fiscal responsibility and address operational needs, the City Manager presents the annual and capital budgets to the City Council and keeps them informed of the city's financial standing. The City Manager's Office is also instrumental in negotiations, both with external agencies and organizations, as well as internal labor agreements.

Analysis

Willdan individually reviewed the services associated with Administrative fees. The review also consisted of an evaluation of existing services in an effort to update the fee schedule.

The analysis of the Administrative services relied primarily upon a standard unit cost build-up approach, whereby the reasonable cost of each fee occurrence was determined using staff time involved with providing the service to recover the direct cost of staff and the pro-rata share of departmental costs, including indirect costs for City Central Services. Willdan then compared the calculated full cost against the current fee amount to determine, if charged, whether the current fee is recovering the costs associated with the requested service. The analysis found that most fees are currently set below full cost. It is recommended that the City set Administrative fees at the levels detailed in [Appendix C](#). As a result, there would be:

- An increase for 11 fees;
- 21 fees would remain as currently set, and;
- the average change in fees would be an increase of 22%.

Airport

The Petaluma Municipal Airport is located at 601 Sky Ranch Drive, on the northeast edge of the city. It is bordered by agricultural and parks/open space land on the north and east, and by residential development on the southwest side. Download Safety Zones [here](#).

The Airport records about 60,000 take-offs and landings each year, equally split between aircraft based in Petaluma and those based elsewhere.

The airport is a convenient access point for tourist travel into the Wine Country and corporate travel to North Bay businesses. It is a hub for FedEx's freight hauling business and home to Mangon Aircraft, Petaluma Pilot Training Center, Cierva Aero, and the Two Niner Diner.

Analysis

Willdan individually reviewed the services associated with the Airport fees. The review also consisted of an evaluation of existing services in an effort to update the fee schedule.

The analysis of the Airport services relied primarily upon a program cost analysis. The cost of operations including indirect cost support from City central service functions was compared against the revenue generated by the current fees to determine their cost recovery. The analysis found that cost recovery is currently around 98%. It is recommended that the City set Airport fees at the levels detailed in [Appendix C](#). Staff compared suggested fees against other airports for reasonableness as well. As a result, there would be:

- An increase for 1 fee;
- 1 fee would decrease;
- 12 new fees would be added, and;
- 34 fees would remain as currently set, and the hangar fees would change from a per sq ft charge to a total amount for each category listed but with no change in the resulting fee for each category.

Building

The Building Division is entrusted with the protection of public health and safety of all building construction in the City through the enforcement of State and Local Building Codes. In addition to fulltime staff, the Building Division utilizes the assistance of outside plans examination consultants to assure that plan review turnaround times are consistently met.

The Building Division is responsible for plan review of all proposed construction to ensure that State and Local Building Code requirements are reflected on plans. These codes include disabled access, life safety, and energy conservation. The Building Division staff performs field inspections of all approved building construction to assure compliance with the approved plans and State and Local Building Codes.

Analysis

Willdan individually reviewed the services and programs associated with the Building Division. The review also consisted of an evaluation of existing services in an effort to update the fee schedule.

The analysis of Building services relied primarily upon a standard unit cost build-up approach (except for fees related to the Building Permit program), whereby we determined the reasonable cost of each fee occurrence using staff time to recover the direct cost of staff and pro-rata share of departmental costs, including indirect costs for City Central Services. The analysis found that most services are currently not in line with the cost of providing them. It is recommended that the City increase cost recovery to 100% for Building services as detailed in [Appendix C](#). As a result, there would be:

- an increase to 27 fees;
- 2 fees would decrease;
- 28 fees would remain as currently set;
- 6 new fees would be added, and;
- the average estimated fee increase would be around 78% for flat fees.

In addition to the above referenced fees listed under Building, the Building Permit fees are also provided by this division. For the Building Permit fees, valuation is used as a proxy for measuring the amount of effort needed to provide services on a case by case basis. This method is an industry standard widely used by other jurisdictions to evaluate the cost of providing service. It is generally understood that the larger and more complex a project is, more time and effort that is required to provide the service. Project valuation also follows that trend, and so by using a combination of either project valuation or historical revenue figures along with a multiplier or cost recovery analysis for historical and anticipated future construction trends, current cost recovery along with variability in charges due to project type and scale is determined. The result of the cost analysis completed using fee activity going back to fiscal year 2022 for Building Permits and found that the program is currently operating at 60% cost recovery. It is suggested that the fees be increased to raise cost recovery to 100%, which would require a 66% increase. Current and new fees are detailed in [Appendix C](#).

Planning

The Planning Division is responsible for all development and associated improvements on private property, including residential, industrial, and commercial projects. The Planning Division leads the effort to implement the City's General Plan and enforce the regulations in the Implementing Zoning Ordinance, Smart Code, and other adopted regulations.

The Division also serves to interpret City policies, ordinances, and codes, and works closely with the City Manager and other City departments. Planning staff interacts with a variety of public and private organizations and citizen groups in developing programs and implementing policies to find creative solutions to planning issues. Planning staff develops specific proposals for action on current City planning proposals; makes interpretations of City regulations and various ordinances, codes and applicable laws to ensure compliance; and works closely with the City Council, citizen boards and commissions, and public and private officials to provide technical assistance, advice, and recommendations related to urban development within the overarching vision of the City's General Plan.

The Planning Division performs a wide range of customer service activities, including operating the public counter to respond to zoning related inquiries and review a range of over-the-counter permits (fence permits, home occupation permits, short term vacation rental permits, etc.). Planning staff conducts zoning clearance for all business license application and reviews building permit application for compliance with zoning regulations. Additionally, the Planning Division organizes and facilitates the City's Development Review Committee.

Analysis

Willdan individually reviewed the services and programs associated with the Planning Division. The review also consisted of an evaluation of existing services in an effort to update the fee schedule.

The analysis of Planning services relied primarily upon a standard unit cost build-up approach, whereby the reasonable cost of each fee occurrence was determined using staff time involved in providing services to recover the direct cost of staff and the pro-rata share of departmental costs, including indirect costs for City Central Services. Willdan then compared the calculated full cost against the current fee amount to determine, if charged, whether the current fee is recovering the costs associated with the requested service. The analysis found that most services are currently set below the full cost of providing them. It is recommended that the City increase cost recovery to 100% for Planning services as detailed in [Appendix C](#). As a result, there would be:

- An increase to 10 fees;
- 44 fees would remain as currently set, and;
- the average estimated fee increase would be around 1% for flat, non-deposit fees.

Housing

The Housing Division is responsible for addressing the City Council's goals to enhance the quality of life for the low-income community through its programs; facilitate the provision of programs, projects and shelter for residents with special needs; provide affordable rental housing; promote housing choices and opportunities; and to promote principles of sustainability. The Division also ensures compliance with federal, state, and local affordability and program compliance; coordinates community nonprofit efforts; nurtures relationships with local agencies (Sonoma County & Santa Rosa), regional Association of Bay Area Governments (ABAG), state Housing Community Development (HCD), and federal Housing and Urban Development (HUD) housing partners.

Analysis

Willdan individually reviewed the services and programs associated with the Housing Division. The review also consisted of an evaluation of existing services in an effort to update the fee schedule.

The analysis of Housing services relied primarily upon a standard unit cost build-up approach, whereby the reasonable cost of each fee occurrence was determined using staff time involved in providing services to recover the direct cost of staff and the pro-rata share of departmental costs, including indirect costs for City Central Services. Willdan then compared the calculated full cost against the current fee amount to determine, if charged, whether the current fee is recovering the costs associated with the requested service. The analysis found that current fee levels are subsidizing the cost for most services to a large degree. It is recommended that the City increase cost recovery to 100% for Housing Monitoring services as detailed in [Appendix C](#). As a result, there would be:

- 7 new fees would be added.

Recreation

The Parks and Recreation Department serves to enhance health and wellness by providing varied recreational opportunities that reflect the evolving needs of our diverse population. Emphasis in working collectively to offer safe and thriving environments to build a stronger, more resilient community. To improve collaboration, efficiency, and service delivery, the Parks and Facilities Maintenance divisions were consolidated with the Recreation Services Division to re-establish the City's unified Parks & Recreation Department in 2021.

The Recreation Services Division plans, coordinates, and implements recreation programs, activities, special events, and classes for toddlers, youth, teens, adults, and older adults. This includes operation of the Petaluma Community Center, Kenilworth Recreation Center, Petaluma Swim Center, Cavanagh Pool, the Senior Center, Petaluma Historical Library and Museum, and oversight of the Cavanagh Pool and Recreation Center. The division is responsible for planning and implementing community-wide special events; presenting a wide array of recreation classes and camps; managing an aquatic agreement that provides programming and pool operations; facilitates athletic field allocation and reservation calendar; and provides a comprehensive adult sports program. The Division supports a number of citizen advisory committees and commissions including the Recreation, Music and Parks Commission, Youth Commission, Senior Advisory Committee, Tree Committee and the Petaluma Museum Association Board of Directors. The Division is highly engaged in a variety of volunteer and partnership projects with several community advocacy groups.

Analysis

Willdan individually reviewed the services and programs associated with the Recreation Services Division. The review also consisted of an evaluation of existing services in an effort to update the fee schedule.

The analysis of Recreation programs and events required a programmatic method to split the departmental costs associated with providing individual programs and events in the study equitably. When the costs are compared against historical and projected program revenues, the result of the analysis shows that the department is not recovering the costs of the programs being provided. Recreation programs provide some measure of public benefit to the residents and City as a whole. Cities generally want to ensure that their programs and services remain affordable to the community at large, and that the programs remain competitive with surrounding jurisdictions. Overall, Recreation cost recovery was analyzed and is to be about 11%. With those factors in mind, staff have suggested reasonable fee adjustments to the fee schedule, and they are detailed in [Appendix C](#). As a result, there would be:

- An increase for 74 fees;
- 9 new fees would be added;
- 20 fees would remain as currently set and;
- overall, the average fee change would be around a 10% increase and would maintain an average subsidy level of 81% for listed fees.

Fire

The Petaluma Fire Department is an all-risk department that is responsible for the following: prevention and extinguishment of fires; medical treatment and transport of the sick and traumatically injured; extrication and rescue of victims; and overall mitigation of emergency-related events impacting the health, welfare and safety of citizens and visitors to the Petaluma area. Founded in 1857, the Department last year celebrated its 166 th year of service.

The Department is responsible for all services related to emergency operations including fire suppression, emergency medical treatment and transport, and extrication and rescue. In addition to serving the residents and visitors to the city, the Department’s ambulances provide care and transport to persons in much of the South Sonoma County area and parts of Marin County.

The Department’s Fire Prevention Bureau (FPB) provides fire and life safety public education to all age groups of the community, as well as the enforcement of local and State laws that promote safety and protect life, the environment, and personal and public property. The FPB has ensured that new development meets the code and safety requirements to keep residents and patrons of Petaluma safe. The FPB also regulates the use of hazardous materials in Petaluma through the Certified Unified Program Agency (CUPA) inspection program.

Analysis

Willdan individually reviewed the services associated with the Fire Department. The review also consisted of an evaluation of existing services in an effort to update the fee schedule.

The analysis of the Fire services relied primarily upon a standard unit cost build-up approach, whereby the reasonable cost of each fee occurrence was determined using staff time involved with providing the service to recover the direct cost of staff and the pro-rata share of departmental costs, including indirect costs for City Central Services. Willdan then compared the calculated full cost against the current fee amount to determine, if charged, whether the current fee is recovering the costs associated with the requested service. The analysis found that most fees are currently set below the full cost of providing the service. It is recommended that the City set Fire fees at the levels detailed in [Appendix C](#). As a result, there would be:

- An increase for 73 fees;
- 54 fees would decrease;
- 3 new fees would be added;
- 1 fee would change to flat from FBHR fee;
- 1 fee would change to flat from no charge fee;
- 7 fees would be based on FEMA/Caltrans rates, and;
- 14 fees would remain as currently set.

Police

The Department is divided into three divisions; Field Services, Professional Standards, and Technical Services. Within these divisions employees are assigned to specific functions including uniformed patrol, traffic enforcement, parking enforcement, code enforcement, investigations, records, communications, and administration. The FY 23-24 Police Department budget reflects this structure.

Police Department Administration oversees the department's three police divisions and coordinates with department staff to ensure accountability, collaboration, and sound fiscal oversight.

Analysis

Willdan individually reviewed the services associated with the Police Department. The review also consisted of an evaluation of existing services in an effort to update the fee schedule.

The analysis of the Police services fee section relied primarily upon a standard unit cost build-up approach, whereby the reasonable cost of each fee occurrence was determined using staff time involved with providing the service to recover the direct cost of staff and the pro-rata share of departmental costs, including indirect costs for City Central Services. Willdan then compared the calculated full cost against the current fee amount to determine, if charged, whether the current fee is recovering the costs associated with the requested service. The analysis resulted in a combination of fees that are currently set below and above full cost. Staff have suggested reasonable fee adjustments to the fee schedule to achieve full cost recovery, and they are detailed in [Appendix C](#). As a result, there would be:

- An increase for 16 fees;
- 9 fees would decrease;
- 3 new fees would be added;
- 13 fees would remain as currently set, and;
- the average estimated fee increase would be around 16% for flat fees.

Public Works

The mission of the Public Works and Utilities Department is to deliver exceptional services to our community through dedication and innovation. The City Council's Goals and Priorities provides the framework that guides our way in defining and implementing departmental priorities and actions. The nature of our work ranges from routine maintenance of our infrastructure, regulatory compliance, designing and constructing capital improvement projects, responding to the climate crisis, preparing for and responding to emergencies, distributing and recycling water, maintaining airport and marina operations, and ensuring that public transportation is available throughout the year. We seek to maintain and improve the quality of life for all residents, organizations, and visitors. Our team's success relies on the sharing and management of equipment, resources, and expertise across the various Public Works divisions and workgroups.

The Engineering Division provides engineering services for capital projects and development entitlements, permitting, inspections, and traffic engineering. Comprehensive Development Engineering addresses new development initiated by outside interests, which involves managing City land transactions and overseeing developer agreements and public improvements. Included in these services are vesting and tentative (parcel) maps, utility service and other encroachment permits, right-of-way management, construction inspections, and traffic engineering. Capital Projects, as the other arm of our Engineering Division, focuses solely on the planning, design, and construction of capital improvements, all initiated and performed by (or contracted by) the City. Combining these functions in a single division allows us to efficiently share and leverage our engineering resources across a broad range of services. It creates a broader knowledge base of engineering-related activities and services, which fosters collaboration and enhances services to the community.

Analysis

Willdan individually reviewed the services associated with the Public Works Department. The review also consisted of an evaluation of existing services in an effort to update the fee schedule.

The analysis of the Public Works services relied primarily upon a standard unit cost build-up approach, whereby the reasonable cost of each fee occurrence was determined using staff time involved with providing the service to recover the direct cost of staff and the pro-rata share of departmental costs, including indirect costs for City Central Services. Willdan then compared the calculated full cost against the current fee amount to determine, if charged, whether the current fee is recovering the costs associated with the requested service. The analysis found that most fees are currently set below the full cost of providing service. It is recommended that the City increase cost recovery to 100% for Public Works services as detailed in [Appendix C](#). As a result, there would be:

- An increase for 11 fees;
- 1 fee would decrease;
- 5 fees would remain as currently set, and;
- the average estimated fee increase would be around 29% for flat fees.

Marina

The waters of the Petaluma Marina are part of the Petaluma River, a channel that runs fourteen miles from the north end of Petaluma to the San Pablo Bay. The river is enjoyed for its excellent boating, fishing, and water skiing. The Harbormaster manages the Petaluma Marina and the Turning Basin. The Marina rents 167 berths in varying size from 22' – 40' and has an overall occupancy average of 60%. The Turning Basin has over 60 berths available for non live-aboard daily or monthly rentals, and temporary transient moorings.

Analysis

Willdan individually reviewed the services associated with the Marina. The review also consisted of an evaluation of existing services in an effort to update the fee schedule.

For the services being provided by the Marina, a programmatic analysis was done to see at what level current fees were recovering the cost of providing services and Marina operations. Overall, Marina cost recovery was analyzed and is to be about 81%. City staff recommends all fees remain at current amounts and to add a new fee for the launching of non-trailerred vessels, as detailed in [Appendix C](#).

Appendix A – Total Allowable Cost to be Recovered

Below are the total allowable costs that may be recovered through User Fees; however, only a portion of the total allowable cost is recovered as staff not only works on services related to User Fees, but also works on an array of other City functions during the operational hours of the City. The amounts listed below will not reconcile to City budgets as costs that should not be included in overhead for personnel in the application of determining fully burdened hourly rates were excluded. Examples of these costs are capital, debt, monetary transfers, contract costs, and any other costs that are charged directly to the service requestor.

City of Petaluma - User Fee Overhead Rate Calculations

Appendix B – Fully Burdened Hourly Rates

Below are fully burdened hourly rates of staff positions that provide for the services detailed in [Appendix C](#). The FBHRs were used to determine the full cost of each service. They include the salary and benefit costs for each position as well as all applicable overhead amounts for each position. When a central service department position works on a fee or project in the purview of an operating department, the overhead rates of the operating department (shown in [Appendix A](#)) will be applied to that central service positions' salary and benefit rate for full cost recovery since indirect overhead cost only applies to non-central service functions of the City. For any user fee service request that is outside the scope of the fees detailed in [Appendix C](#), or for services for which there is no fee currently set, the City can charge up to the full cost of the FBHR for personnel involved.

Appendix C – Cost Recovery Analysis

The following tables provide the results of the analysis, resulting full cost recovery amount, and recommended fees. For fees, services, and penalties in which the full cost, existing fee, and suggested fee is listed as “NA,” the amount or percentage was not calculable. This is most common when either the current or the suggested fee includes a variable component that is not comparable on a one-to-one basis, a full cost was not calculated (for penalties, fines, market-based fees, or items not included in the study), or when there is not a current fee amount to compare against.

ADMINISTRATIVE FEES

Item No.	Title	Current Fee/Charge	Unit	Notes
1	Convenience Fee For Direct Credit Cards - Applies To City Charges	2.5%		
2	Convenience Fee For Transactions on Energov and other Platforms	Varies
