Dear City Council:

Public safety is the #1 responsibility for you, our trusted city leaders.

Evaluating the potential connectors tonight at workshop, please consider the total cost vs benefit of each connector in terms of

1. Flood risk given changes in flood modeling/mapping per Climate Change and sea level rise
2. Flood risk per USACE direction to never build on land above the 40-yr-storm Payran Flood Wall and Weir
3. Air quality (and Climate Emergency & goals) when we destroy city's (by far) largest, highly valuable carbon sequestration assets: acres of wetlands and Old Growth Forest
4. Police response time when station is moved
5. Fire response times in south part of city
6. Safety compromised/lost when we waste \$ on such an expensive Rainier when we could use that money for greater safety gains (opportunity cost)

Thank you,

Taryn
